

Feeder House Chains

**Feeder house chains available for CASE IH,
New Holland, John Deere, Gleaner and Massey
combines**

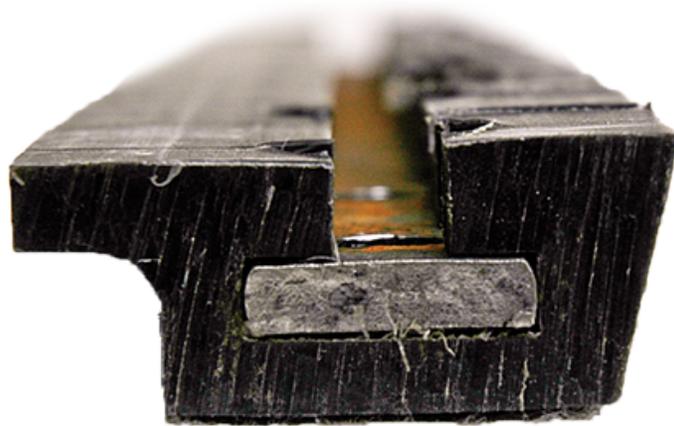

Light weight and strong for longer life. The Harvest Services Original Plastic Slat Feeder Chain was developed for longer service life, better performance over OEM and with less wear and tear on your combine's feeder house. It's lightweight plastic slats are spring steel reinforced for less wear and tear on your combine's feeder housing while still providing better feeding action due to the unique profile of the slat. Additionally, the slat is designed to deflect and rebound to shape after encountering larger solid objects that may be introduced into the feeder house.

Featuring

The Original Plastic Slat

Up to 50% lighter than OEM, strong, with a unique shape that provides exceptionally positive feeding action into the concaves of your combine. Lighter weight results in significantly less wear and tear on sprockets, bearings, chain and the feeder house along with quieter operation.

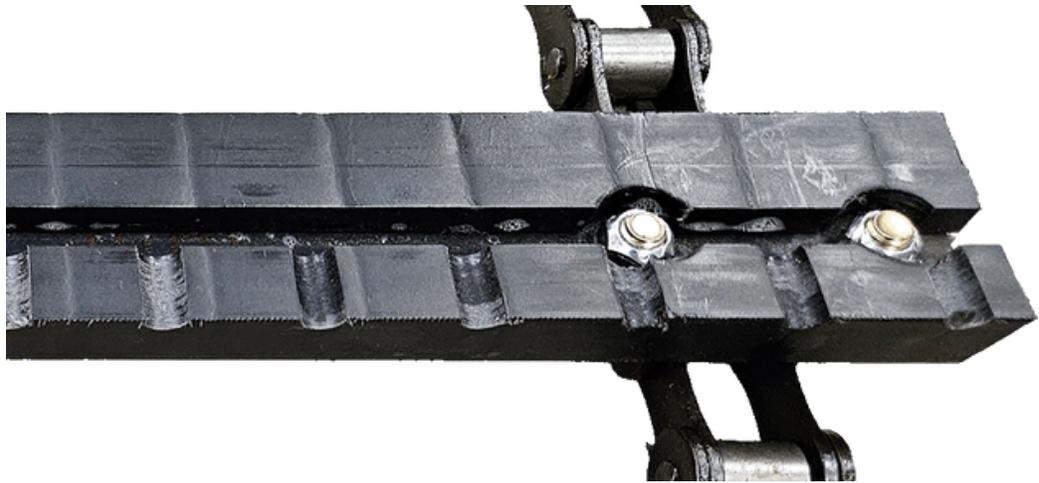

Spring Steel Insert

The spring steel insert allows for the slat to deflect and return to shape rather than permanently bend like steel slats. This means less maintenance issues over the life of the chain to worry about.

Heavy Duty Chain

Harvest Services utilizes heavy duty premium chain in all of our Original Plastic Slat Feeder Chains for a long lasting, worry free component

Easily Replaceable Slats

Harvest Services bolts the plastic slat to the chain for an easily replaceable slat. Reduce your time and maintenance costs to have a successful harvest.
