

Mad Maxx Feed Accelerator (Beater)

- More aggressive teeth
- Dynamically balanced
- Handles more material without plugging
- 30% to 40% more done in tough conditions

Mad Maxx Feed Accelerator

Mad Maxx Feed Accelerator

Designed for smooth efficient crop flow with a small tube and large paddles. Made with thick seamless pipe and all wear components out of AR400, this accelerator has garnered the nickname Mad Maxx... because rocks and tough crop fear him!

Every beater we build starts off on an industry leading Sched 40 seamless pipe. This thick, high quality pipe ensures our customers will never have to deal with bent and dented drums. The ramped design of the paddle helps kick rocks to the rock trap and not into your rotor.

All wear components are made out of AR400 to ensure years of maintenance free use.

Dynamically balanced to ensure vibration free operation.

Plugging the front end of the Deere combine is no fun.

Burned up belts, busted knuckles and major downtime can all be avoided with a Mad Max beater. Its named after the movie character because this beauty looks post apocalyptic!

Solid one piece design requires no maintenance and the high capacity throughput means no plugging, no burned up belts and best of all no downtime.
